Our SERVICE'S

SERVER

Physical, A physical server, also known as a 'bare-metal server,' is a single-tenant computer server, meaning that a specific physical server is designated to a single user. Each physical server includes memory, processor, network connection, hard drive, and an operating system (OS) for running programs and applications.

Cloud, A cloud server is a virtual server (rather than a physical server) running in a cloud computing environment. It is built, hosted and delivered via a cloud computing platform via the internet, and can be accessed remotely. They are also known as virtual servers.

Our SERVICE'S

NETWORK

Internet, The Internet is a vast network that connects computers all over the world. Through the Internet, people can share information and communicate from anywhere with an Internet connection.

Router, A router is a networking device that forwards data packets between computer networks. Routers perform the traffic directing functions on the Internet. Data sent through the internet, such as a web page or email, is in the form of data packets.

Access Point, An access point is a wireless network device that acts as a portal for devices to connect to a local area network. Access points are used for extending the wireless coverage of an existing network and for increasing the number of users that can connect to it.

Our SERVICE'S

STORAGE

File storage is a method for storing data in the cloud that provides servers and applications access to data through shared file systems. This compatibility makes cloud file storage ideal for workloads that rely on shared file systems and provides simple integration without code changes.

Backup, Backup storage refers to physical locations or devices for storing copies of data for recovery in the event of failure or data loss. Backup storage systems usually include both the hardware and the software for managing copies and recovery.

Our SERVICE'S

SECURITY

CCTV, CCTV stands for closed-circuit television and is commonly known as video surveillance. "Closed-circuit" means broadcasts are usually transmitted to a limited (closed) number of monitors, unlike "regular" TV, which is broadcast to the public at large.

Access Control

In the fields of physical security and information security, access control is the selective restriction of access to a place or other resource, while access management describes the process. The act of accessing may mean consuming, entering, or using.

Firewall, A firewall is a network security device that monitors incoming and outgoing network traffic and decides whether to allow or block specific traffic based on a defined set of security rules.

Our SERVICE'S

VOICE

IP PHONE A VoIP phone or IP phone uses voice over IP technologies for placing and transmitting telephone calls over an IP network, such as the Internet. This contrasts with a standard phone which uses the traditional public switched telephone network.

IP-PBX, An IP PBX is a system that connects telephone extensions to the public switched telephone network (PSTN) and provides internal communication for a business.

Our SERVICE'S

LICENSE

SSL, SSL stands for Secure Sockets Layer and, in short, it's the standard technology for keeping an internet connection secure and safeguarding any sensitive data that is being sent between two systems, preventing criminals from reading and modifying any information transferred.

Anti Virus,

Antivirus is a kind of software used to prevent, scan, detect and delete viruses from a computer. Once installed, most antivirus software runs automatically in the background to provide real-time protection against virus attacks.

Software,

A software license is a document that provides legally binding guidelines for the use and distribution of software. Software licenses typically provide end users with the right to one or more copies of the software without violating copyrights.

Our SERVICE'S

SAFETY

Land Safe tool use contributes to a safer, more efficient work environment. Misusing tools is not only dangerous, it shows a lack of understanding of tool safety and a lack of respect for those around you. Also, if improper tool use causes an accident, downtime will impact the entire job.

Marine, Safety for the head. Protect your eyes. Hearing protection. Maintain a good respiration. Protect your hands with the right gloves. Protection for the feet. Wear the correct work clothing.

Our SERVICE'S

TRACKING

GPS, The Global Positioning System (GPS) is a navigation system using satellites, a receiver and algorithms to synchronize location, velocity and time data for air, sea and land travel.

Asset, is concerned with tracking items that a business permanently owns and uses repeatedly.

Personal Locator, Personal Locator Beacons for giving alerts of Man overboard Incident. Using AIS and VHF for alerts and providing GPS location of victim.
